Isotopes in Hydrology, Hydrogeology, and Water Resources B. P. Singh

The stable isotopes of hydrogen and oxygen of water molecule, environmental radioactive isotopes ^3H , ^{10}Be , ^{14}C , ^{26}Al , ^{32}Si , ^{36}Cl , ^{39}Ar , ^{53}Mn , ^{59}Ni , ^{81}Kr and ^{137}Cs , nuclear explosion- produced ^3H , ^{36}Cl , ^{85}Kr , ^{129}I are some of the isotopes which have played a vital role in understanding the movement of water in hydrological cycle especially in hydrology, hydrogeology and water resources. There are many other radioactive isotopes specially ^{131}I , ^{82}Br , ^{22}Na ^{198}Au and other short-lived isotopes which are used as tracers. Further gamma radiations from many radioactive isotopes, specially ^{137}Cs , ^{134}Cs , ^{60}Co and neutrons from Radium Beryllium and other sources, all as sealed sources, have been found very useful for understanding movement of water and sediments in the hydrological systems. This requires the basic understanding of the isotopes, their interaction with matter and also their detection in laboratory and in situ conditions.
