Reconstructing Evolution: New Mathematical and Computational Advances

Reconstructing Evolution: New Mathematical and Computational Advances

Reconstructing Evolution: New Mathematical and Computational Advances
Evolution is a complex process, acting at multiple scales, from DNA sequences and proteins to populations of species. Understanding and reconstructing evolution is of major importance in numerous subfields of biology. For example, phylogenetics and sequence evolution is central to comparative genomics, attempts to decipher genomes, and molecular epidemiology. Phylogenetics is also the focal point of large-scale international biodiversity assessment initiatives such
as the 'Tree of Life' project, which aims to build the evolutionary tree for all extant species.

Since the pioneering work in phylogenetics in the 1960s, models have become increasingly sophisticated to account for the inherent complexity of evolution. They rely heavily on mathematics and aim at modelling and analyzing biological phenomena such as horizontal gene transfer, heterogeneity of mutation, and speciation and extinction processes. This book presents these recent models, their biological relevance, their mathematical basis, their properties, and the algorithms to infer them from
data. A number of subfields from mathematics and computer science are involved: combinatorics, graph theory, stringology, probabilistic and Markov models, information theory, statistical inference, Monte Carlo methods, continuous and discrete algorithmics.

This book arises from the Mathematics of Evolution & Phylogenetics meeting at the Mathematical Institute Henri Poincaré, Paris, in June 2005 and is based on the outstanding state-of-the-art reports presented by the conference speakers. Ten chapters - based around five themes - provide a detailed overview of key topics, from the underlying concepts to the latest results, some of which are at the forefront of current research.

From reader reviews:

Janice Delarosa:

Book is to be different per grade. Book for children until eventually adult are different content. To be sure that book is very important usually. The book Reconstructing Evolution: New Mathematical and Computational Advances has been making you to know about other knowledge and of course you can take more information. It is rather advantages for you. The guide Reconstructing Evolution: New Mathematical and Computational Advances is not only giving you considerably more new information but also to become your friend when you feel bored. You can spend your current spend time to read your publication. Try to make relationship using the book Reconstructing Evolution: New Mathematical and Computational Advances. You never experience lose out for everything when you read some books.

Constance Argueta:

The e-book with title Reconstructing Evolution: New Mathematical and Computational Advances contains a lot of information that you can learn it. You can get a lot of advantage after read this book. This specific book exist new information the information that exist in this reserve represented the condition of the world currently. That is important to yo7u to understand how the improvement of the world. This book will bring you throughout new era of the internationalization. You can read the e-book on your own smart phone, so you can read it anywhere you want.

Nancy Bowers:

Many people spending their time frame by playing outside having friends, fun activity having family or just watching TV 24 hours a day. You can have new activity to shell out your whole day by reading a book. Ugh, do you think reading a book can actually hard because you have to take the book everywhere? It fine you can have the e-book, delivering everywhere you want in your Smart phone. Like Reconstructing Evolution: New Mathematical and Computational Advances which is keeping the e-book version. So , why not try out this book? Let's observe.

Ernest Nunez:

As we know that book is very important thing to add our information for everything. By a publication we can know everything you want. A book is a group of written, printed, illustrated or blank sheet. Every year was exactly added. This reserve Reconstructing Evolution: New Mathematical and Computational Advances was filled with regards to science. Spend your spare time to add your knowledge about your scientific disciplines competence. Some people has distinct feel when they reading a new book. If you know how big benefit from a book, you can experience enjoy to read a guide. In the modern era like now, many ways to get book that you just wanted.
