Cracking the Genome: Inside the Race To Unlock Human DNA Kevin Davies

In 1953, James Watson and Francis Crick discovered the double helix structure of DNA. The discovery was a profound, Nobel Prize-winning moment in the history of genetics, but it did not decipher the messages on the twisted, ladderlike strands within our cells. No one knew what the human genome sequence actually was. No one had cracked the code of life. Now, at the beginning of a new millennium, that code has been cracked. Kevin Davies, founding editor of the leading journal in the field, *Nature Genetics*, has relentlessly followed the story as it unfolded, week by week, for ten years. Here for the first time, in rich human, scientific, and financial detail, is the dramatic story of one of the greatest scientific feats ever accomplished: the mapping of the human genome.

In 1990, the U.S. government approved a 15-year, \$3 billion plan to launch the Human Genome Project, whose goal was to sequence the 3 billion letters of human DNA. At the helm of the project was James Watson, who resigned after only a couple of years, following a feud with National Institutes of Health (NIH) Director Bernadine Healy over gene patenting. His successor was the brilliant young medical geneticist Francis Collins, who had made his name discovering the gene for cystic fibrosis. As Davies reports, Collins is a devout Christian who has traveled to Africa to work in a missionary hospital. He believes the human genome sequence is "the language of God." Just as Collins became project director, J. Craig Venter, a maverick DNA sequencer and Vietnam veteran, was leaving the NIH to start his own private research institute. Venter had developed a simple "shotgun" strategy for sequencing DNA, and his fame skyrocketed when his new institute proved his sequencing system worked by becoming the first to sequence the entire genome of a microorganism.

Only 3 percent of the human genome had been sequenced by early 1998, the public project's halfway point. That same year, Venter was approached by PE Corporation to launch a private human genome project. He stunned the world when he announced the formation of a new company to sequence the human genome in a mere three years for \$300 million. A war of words broke out between public and private researchers. Undeterred, Venter built Celera Genomics with the motto "Speed matters. Discovery can't wait." and an \$80 million supercomputer. While the insults intensified, Celera's stock price soared, tumbled, and soared again. Negotiations for cooperation between the public and private institutes began, only to fall apart in acrimony. Then in the spring of 2000 President Clinton stepped in, telling his science adviser to restart negotiations. History was about to be made.

Davies captures the drama of this momentous achievement, drawing on his own genetics expertise and interviews with key scientists including Venter and Collins, as well as Eric Lander, an MIT computer wizard who refers to the public genome project as "the forces of good"; Kari Stefánsson, the genetics entrepreneur who is remaking Iceland's economy; and John Sulston, chief of the UK genome project, who led the charge against gene patenting. Davies has visited geneticists around the world to illustrate a vast international enterprise working on the frontier of human knowledge. *Cracking the Genome* is the definitive account of how the code that holds the answers to the origin of life, the evolution of humanity, and the future of medicine was broken.

From reader reviews:

Stephen Galvan:

In other case, little folks like to read book Cracking the Genome: Inside the Race To Unlock Human DNA. You can choose the best book if you like reading a book. Provided that we know about how is important the book Cracking the Genome: Inside the Race To Unlock Human DNA. You can add know-how and of course you can around the world by way of a book. Absolutely right, since from book you can understand everything! From your country until eventually foreign or abroad you will find yourself known. About simple matter until wonderful thing you may know that. In this era, we could open a book or maybe searching by internet product. It is called e-book. You can utilize it when you feel uninterested to go to the library. Let's study.

Della McDonald:

Book is to be different for every single grade. Book for children until adult are different content. As we know that book is very important for people. The book Cracking the Genome: Inside the Race To Unlock Human DNA was making you to know about other understanding and of course you can take more information. It is rather advantages for you. The guide Cracking the Genome: Inside the Race To Unlock Human DNA is not only giving you a lot more new information but also to be your friend when you really feel bored. You can spend your own personal spend time to read your book. Try to make relationship with all the book Cracking the Genome: Inside the Race To Unlock Human DNA. You never sense lose out for everything in case you read some books.

Linda White:

Here thing why this particular Cracking the Genome: Inside the Race To Unlock Human DNA are different and dependable to be yours. First of all studying a book is good but it depends in the content of it which is the content is as delightful as food or not. Cracking the Genome: Inside the Race To Unlock Human DNA giving you information deeper as different ways, you can find any publication out there but there is no reserve that similar with Cracking the Genome: Inside the Race To Unlock Human DNA. It gives you thrill reading through journey, its open up your own eyes about the thing which happened in the world which is perhaps can be happened around you. You can actually bring everywhere like in park, café, or even in your approach home by train. Should you be having difficulties in bringing the published book maybe the form of Cracking the Genome: Inside the Race To Unlock Human DNA in e-book can be your substitute.

Phillip Darrah:

This Cracking the Genome: Inside the Race To Unlock Human DNA is new way for you who has interest to look for some information as it relief your hunger of information. Getting deeper you on it getting knowledge more you know or you who still having little bit of digest in reading this Cracking the Genome: Inside the Race To Unlock Human DNA can be the light food in your case because the information inside

this kind of book is easy to get by anyone. These books build itself in the form and that is reachable by anyone, sure I mean in the e-book contact form. People who think that in guide form make them feel sleepy even dizzy this book is the answer. So there is absolutely no in reading a publication especially this one. You can find what you are looking for. It should be here for a person. So , don't miss the item! Just read this e-book style for your better life and also knowledge.
