Analyzing Neural Time Series Data: Theory and Practice (Issues in Clinical and Cognitive Neuropsychology) Mike X Cohen

This book offers a comprehensive guide to the theory and practice of analyzing electrical brain signals. It explains the conceptual, mathematical, and implementational (via Matlab programming) aspects of time-, time-frequency- and synchronization-based analyses of magnetoencephalography (MEG), electroencephalography (EEG), and local field potential (LFP) recordings from humans and nonhuman animals. It is the only book on the topic that covers both the theoretical background and the implementation in language that can be understood by readers without extensive formal training in mathematics, including cognitive scientists, neuroscientists, and psychologists. Readers who go through the book chapter by chapter and implement the examples in Matlab will develop an understanding of why and how analyses are performed, how to interpret results, what the methodological issues are, and how to perform single-subject-level and group-level analyses. Researchers who are familiar with using automated programs to perform advanced analyses will learn what happens when they click the "analyze now" button. The book provides sample data and downloadable Matlab code. Each of the 38 chapters covers one analysis topic, and these topics progress from simple to advanced. Most chapters conclude with exercises that further develop the material covered in the chapter. Many of the methods presented (including convolution, the Fourier transform, and Euler's formula) are fundamental and form the groundwork for other advanced data analysis methods. Readers who master the methods in the book will be well prepared to learn other approaches.

From reader reviews:

James Marcus:

Book is actually written, printed, or highlighted for everything. You can know everything you want by a reserve. Book has a different type. As we know that book is important point to bring us around the world. Adjacent to that you can your reading ability was fluently. A guide Analyzing Neural Time Series Data: Theory and Practice (Issues in Clinical and Cognitive Neuropsychology) will make you to become smarter. You can feel considerably more confidence if you can know about everything. But some of you think this open or reading any book make you bored. It is far from make you fun. Why they are often thought like that? Have you looking for best book or acceptable book with you?

Erna Taylor:

Nowadays reading books are more than want or need but also work as a life style. This reading practice give you lot of advantages. The benefits you got of course the knowledge the particular information inside the book that will improve your knowledge and information. The information you get based on what kind of guide you read, if you want drive more knowledge just go with training books but if you want truly feel happy read one having theme for entertaining like comic or novel. The particular Analyzing Neural Time Series Data: Theory and Practice (Issues in Clinical and Cognitive Neuropsychology) is kind of publication which is giving the reader capricious experience.

Jerry Smith:

Analyzing Neural Time Series Data: Theory and Practice (Issues in Clinical and Cognitive Neuropsychology) can be one of your starter books that are good idea. All of us recommend that straight away because this book has good vocabulary that may increase your knowledge in terminology, easy to understand, bit entertaining but still delivering the information. The author giving his/her effort that will put every word into pleasure arrangement in writing Analyzing Neural Time Series Data: Theory and Practice (Issues in Clinical and Cognitive Neuropsychology) yet doesn't forget the main position, giving the reader the hottest along with based confirm resource data that maybe you can be considered one of it. This great information could draw you into completely new stage of crucial thinking.

Thomas Dacosta:

Reading a book to be new life style in this year; every people loves to read a book. When you examine a book you can get a large amount of benefit. When you read books, you can improve your knowledge, since book has a lot of information onto it. The information that you will get depend on what types of book that you have read. If you want to get information about your review, you can read education books, but if you act like you want to entertain yourself you can read a fiction books, these kinds of us novel, comics, and soon. The Analyzing Neural Time Series Data: Theory and Practice (Issues in Clinical and Cognitive Neuropsychology) provide you with a new experience in reading a book.
