## Geomorphology and Groundwater

Geomorphology and Groundwater is an up-to-the-minute collection dealing with the overlap between geomorphology and hydrogeology. These two disciplines have much to offer each other in several fields such as river groundwater interactions, the location and evolution of aquifers, karst and landform evolution. There is increasing realisation that groundwater plays an important role in many geomorphological processes and of the utility of geomorphological techniques and ideas in the analysis of groundwater systems. The authors contributing to this volume are drawn from a wide variety of backgrounds and include research geomorphologists, engineers and consulting hydrogeologists. Much of the work reported here applies to or has immediate applications to such environmental problems as arid-zone water supply, groundwater pollution, wetland conservation, fisheries management and landscape protection. As such this book will be of value not only to researchers in the respective fields, but to all those interested in groundwater-related environmental issues.
