Research in the theory of trigonometric series has been carried out for over two centuries. The results obtained have greatly influenced various fields of mathematics, mechanics, and physics. Nowadays, the theory of simple trigonometric series has been developed fully enough (we will only mention the monographs by Zygmund [15, 16] and Bari [2]). The achievements in the theory of multiple trigonometric series look rather modest as compared to those in the one-dimensional case though multiple trigonometric series seem to be a natural, interesting and promising object of investigation. We should say, however, that the past few decades have seen a more intensive development of the theory in this field. To form an idea about the theory of multiple trigonometric series, the reader can refer to the surveys by Shapiro [1], Zhizhiashvili [16], [46], Golubov [1], D'yachenko [3]. As to monographs on this topic, only that of Yanushauskas [1] is known to me. This book covers several aspects of the theory of multiple trigonometric Fourier series: the existence and properties of the conjugates and Hilbert transforms of integrable functions; convergence (pointwise and in the LP-norm, $p > 0$) of Fourier series and their conjugates, as well as their summability by the Cesaro (C, a) , $a > -1$, and Abel-Poisson methods; approximating properties of Cesaro means of Fourier series and their conjugates.

From reader reviews:

Lorraine Briggs:

Playing with family in a very park, coming to see the coastal world or hanging out with close friends is thing that usually you have done when you have spare time, then why you don't try matter that really opposite from that. One particular activity that make you not sensation tired but still relaxing, trilling like on roller coaster you already been ride on and with addition associated with. Even you love Trigonometric Fourier Series and Their Conjugates (Mathematics and Its Applications), it is possible to enjoy both. It is fine combination right, you still wish to miss it? What kind of hang type is it? Oh seriously its mind hangout fellas. What? Still don't buy it, oh come on its named reading friends.

James Jean:

Reading a book to become new life style in this yr; every people loves to read a book. When you read a book you can get a large amount of benefit. When you read guides, you can improve your knowledge, since book has a lot of information onto it. The information that you will get depend on what sorts of book that you have read. In order to get information about your examine, you can read education books, but if you act like you want to entertain yourself you can read a fiction books, this kind of us novel, comics, as well as soon. The Trigonometric Fourier Series and Their Conjugates (Mathematics and Its Applications) provide you with a new experience in looking at a book.

Diane Worrell:

You can spend your free time you just read this book this e-book. This Trigonometric Fourier Series and Their Conjugates (Mathematics and Its Applications) is simple to bring you can read it in the park, in the beach, train and soon. If you did not get much space to bring the printed book, you can buy the e-book. It is make you easier to read it. You can save the particular book in your smart phone. Consequently there are a lot of benefits that you will get when you buy this book.

Sara Pacheco:

Do you like reading a reserve? Confuse to looking for your best book? Or your book had been rare? Why so many problem for the book? But just about any people feel that they enjoy with regard to reading. Some people likes studying, not only science book but additionally novel and Trigonometric Fourier Series and Their Conjugates (Mathematics and Its Applications) or maybe others sources were given expertise for you. After you know how the great a book, you feel wish to read more and more. Science reserve was created for teacher or maybe students especially. Those guides are helping them to add their knowledge. In some other case, beside science guide, any other book likes Trigonometric Fourier Series and Their Conjugates (Mathematics and Its Applications) to make your spare time considerably more colorful. Many types of book like here.
