Chapter 05, MicroRNA in Oncogenesis Trygve Tollefsbol

NOTE: This is a single chapter excerpted from the book *Epigenetics in Human Disease*, made available for individual purchase. Additional chapters, as well as the entire book, may be purchased separately.

Epigenetics is one of the fastest growing fields of sciences, illuminating studies of human diseases by looking beyond genetic make-up and acknowledging that outside factors play a role in gene expression. The goal of this volume is to highlight those diseases or conditions for which we have advanced knowledge of epigenetic factors such as cancer, autoimmune disorders and aging as well as those that are yielding exciting breakthroughs in epigenetics such as diabetes, neurobiological disorders and cardiovascular disease. Where applicable, attempts are made to not only detail the role of epigenetics in the etiology, progression, diagnosis and prognosis of these diseases, but also novel epigenetic approaches to the treatment of these diseases. Chapters are also presented on human imprinting disorders, respiratory diseases, infectious diseases and gynecological and reproductive diseases. Since epigenetics plays a major role in the aging process, advances in the epigenetics of aging are highly relevant to many age-related human diseases. Therefore, this volume closes with chapters on aging epigenetics and breakthroughs that have been made to delay the aging process through epigenetic approaches. With its translational focus, this book will serve as valuable reference for both basic scientists and clinicians alike.

- Comprehensive coverage of fundamental and emergent science and clinical usage
- Side-by-side coverage of the basis of epigenetic diseases and their treatments
- Evaluation of recent epigenetic clinical breakthroughs

From reader reviews:

Paul Weston:

The book Chapter 05, MicroRNA in Oncogenesis can give more knowledge and information about everything you want. Exactly why must we leave the best thing like a book Chapter 05, MicroRNA in Oncogenesis? A number of you have a different opinion about reserve. But one aim which book can give many info for us. It is absolutely suitable. Right now, try to closer together with your book. Knowledge or details that you take for that, you can give for each other; you could share all of these. Book Chapter 05, MicroRNA in Oncogenesis has simple shape nevertheless, you know: it has great and massive function for you. You can search the enormous world by wide open and read a reserve. So it is very wonderful.

Christina Ochs:

This Chapter 05, MicroRNA in Oncogenesis usually are reliable for you who want to be a successful person, why. The reason why of this Chapter 05, MicroRNA in Oncogenesis can be one of many great books you must have is actually giving you more than just simple studying food but feed you actually with information that probably will shock your earlier knowledge. This book is actually handy, you can bring it everywhere you go and whenever your conditions in the e-book and printed versions. Beside that this Chapter 05, MicroRNA in Oncogenesis forcing you to have an enormous of experience such as rich vocabulary, giving you trial of critical thinking that we know it useful in your day action. So , let's have it and enjoy reading.

John Smithers:

A lot of people always spent their own free time to vacation or go to the outside with them family or their friend. Are you aware? Many a lot of people spent that they free time just watching TV, or perhaps playing video games all day long. If you need to try to find a new activity honestly, that is look different you can read a new book. It is really fun for you. If you enjoy the book which you read you can spent all day long to reading a publication. The book Chapter 05, MicroRNA in Oncogenesis it is quite good to read. There are a lot of those who recommended this book. These were enjoying reading this book. When you did not have enough space bringing this book you can buy typically the e-book. You can m0ore quickly to read this book from a smart phone. The price is not too costly but this book possesses high quality.

Stephen Redmond:

As a scholar exactly feel bored to reading. If their teacher questioned them to go to the library as well as to make summary for some publication, they are complained. Just little students that has reading's soul or real their passion. They just do what the instructor want, like asked to go to the library. They go to at this time there but nothing reading significantly. Any students feel that studying is not important, boring as well as can't see colorful images on there. Yeah, it is for being complicated. Book is very important for you personally. As we know that on this period of time, many ways to get whatever we wish. Likewise word says, many ways to reach Chinese's country. Therefore this Chapter 05, MicroRNA in Oncogenesis can make you experience more interested to read.
